Working with a Neurodivergent Workforce

Not a Culture Fit — And That's the Point

Sam S. Easter

HR Elevate Conference – 2025

CATALYST SOLUTIONS
SPARK CHANGE

Hi!

I'm Sam

Roles

Investigative Journalist → Educator → Instructional Design → HR Strategist →
Communications Manager → Founder

Experience

Leadership of People, Projects & programs · Small business · Education · Startups ·
Corporate · Policy

Education

BA Journalism/Creative Writing + MEd Cross-Cultural Education + MBA (Analytics) +
Six Sigma (Cert.) + Univ. Teaching (Cert.)

Expertise

- Strategic communications & organizational storytelling
- Instructional design & workforce training
- Global & cross-cultural learning & development
- Skill-path design & assessment
- Research, data collection & analysis
- Neurodivergent: Autism + ADHD
- Nine therapists in 18 years (character development + field research)

Agenda

- 1 My Interview Story
- 2 Neurodiversity 101
- 3 Culture Fit vs. Culture Add
- 4 The ROI of Different Thinking
- 5 Storytime: A Case Study

The Interview Story

Context

MBA (~2017) ·

Internship interviews

Allegiant Air — Financial
Analyst (case interview)

Why it matters

Not about the “right”
number—about how you
think under constraints.

“

Prompt

“How much revenue came
from in-flight drinks on all
our flights out of Miami
yesterday?”

1

My Answer

"Zero."

The Reaction

"We were looking for
a framework."

1

The Takeaway

They weren't looking
for the right answer—
just the **right way of
thinking.**

2

Neurodiversity

101

**The list of neurodivergent conditions is hotly debated. This version covers what's common, what's frequent, and what plays nice with the cruel geometry of an 8-bubble chart*

*Also known as Developmental Coordination Disorder (DCD).
Also known as Sensory Processing Disorder (SPD).**

2

Neurodiversity 101

Neurodiversity is the idea that brains naturally work in different ways.

Autism, ADHD, and similar conditions come with both strengths and struggles.

The focus is on **understanding** and **supporting**—not fixing—these differences.

2

Neurodiversity 101

10% to 40% of the U.S. population are neurodivergent.

In the US, approximately:

- 19% has anxiety
- 15% is dyslexic
- 11% has ADHD
- 3% is autistic

76% don't disclose at work..

2

Neurodiversity 101

Analogy: Different OS. Same work.

- Most people (neurotypical) run **Windows**.
- A significant minority (neurodivergent) run **Mac**.

If you build for Windows-only, Mac users struggle—not because they can't do the job, but because the system isn't built for them.

2

“Everyone says they are neurodivergent today.”

Left-handedness didn't suddenly appear—it became visible once society quit punishing it.

The history of left-handedness

Rate of left-handedness among Americans, by year of birth

WAPO.ST/**WONKBLOG**

Source: Survey data reported in “The History and Geography of Human Handedness” (2009)

2

Neurodiversity 101

Real Reasons for the Rise in Neurodiversity

- **Awareness & access:** more screenings, adult pathways
- **Criteria changes:** DSM updates, broader recognition
- **Stigma drop:** safer to seek diagnosis/support
- **Environment:** prenatal exposures, early stressors
- **Genetics:** heritability + better family documentation

3

Culture Fit vs. Culture Add

The Innovation and Engagement Blindspot

"Culture Fit" is often a well-intentioned blindspot.

We think it reduces risk.

In reality, it maximizes groupthink.

It's hiring for comfort and conformity.

The result? An echo chamber.

3

Culture Fit vs. Culture Add

The Price of Sameness

- Slows adaptation
- Misses opportunities
- Vulnerable to disruption

Innovation requires difference.

3

Culture Fit vs. Culture Add

Culture Add: De-risking Your Future

- Drives innovation
- Boosts adaptability
- Builds resilience
- Deepens engagement

Diversity is strength.

3

Culture Fit vs. Culture Add

The Permission Signal

We add to the culture by who we are:

- We question assumptions.
- We model that failure is part of innovation.
- We make unexpected connections.

It sends a clear message:

**"It's safe to
be different
here."**

4

The ROI of Different Thinking

The Hiring Blindspot

We say we want innovation, but our systems are built for conformity.

Hiring processes often test for:

- **Familiarity:** Does their thinking match what we expect?
- **Comfort:** Do they present their ideas in a comfortable way?
- **Polish:** Can they perform well in a traditional interview?

This creates a blindspot that filters out the very people we need most.

4

The ROI of Different Thinking

Would your process hire a genius?

Leonardo da Vinci:

A chronic procrastinator who constantly missed deadlines. Unemployable by modern HR standards.

The traits we flag as "risks" are often the flip side of genius.

4

The ROI of Different Thinking

Performance, Not Pity

*'I have offended God and
mankind by doing so little
with my life'*

-Leonardo da Vinci:

High performers don't need the
bar lowered. They need the
friction removed.

4

The ROI of Different Thinking

Small investment. Massive return.

What's the ROI on a little trust?

The Investment:

- Trust me to keep going.
- Expense a burrito.
- Flexibility to sleep in tomorrow.

The Return:

- 4 more hours of "full-system-lock" deep work.
- A day and a half of value
- A case study shared with our C-Suite

This isn't an accommodation. It's the best deal you'll get all week.

4

The ROI of Different Thinking

You're Already Using Our Tools

The good news? Your teams are already using systems created for neurodivergent minds.

- **The Bullet Journal:** A worldwide phenomenon for focus, created by a designer with ADHD.
- **Visual Planners (Trello, Asana):** A lifeline for non-linear thinkers who need to see the whole picture.
- **Remote Work:** Championed for years by the disability community as a better way to work.

You've already adopted our scaffolding. Now, embrace the architects.

5

Storytime: A Case Study

The Meeting Meltdown

Let's walk through a real-world scenario.

We have Alex, a brilliant AudHD systems-thinker.

She's in a high-stakes meeting and spots a critical error.

Core Conflict: Correctness vs. Cohesion

5

Storytime: A Case Study

The Dialogue

Alex: "The data source is wrong... it's a 15% margin error."

Grant (Consultant): "We can clean up those details later."

Bob (Peer): "You're nitpicking the details again."

5

Storytime: A Case Study

Alex's Status Log

- Late 3.5 min (vendor finally called back).
- Spotted a 15% margin error: "active" \neq producing; ~15% downtime excluded \rightarrow forecast skewed.
- Asked source / clarified definition; room cooled.
- Pushback: "nitpicky again."
- State: Tried to follow the rules; unclear what to fix \rightarrow pausing to observe.

"I messed up again, but I'm not sure how. I'll just try to stay out of trouble."

Storytime: A Case Study

What was the real issue? (*Choose the best answer*)

- A. She was late to the meeting
- B. Her timing and approach were off
- C. She focused on too granular of a detail
- D. She interrupted the presenter

Where to go next?

Fix Your Job Descriptions: Describe the problem to be solved, not the person.

Rethink "Culture Fit": Replace it with "Value Alignment" or "Mission Contribution."

Create Side Doors: Use paid, project-based trials to see real skills in action.

Thank you!
